NOTE: This is a 'working draft' sequence. It currently consists of 12 contigs. The true order of the pieces is not known and their order in this sequence record is arbitrary. Gaps between the contigs are represented as runs of N, but the exact sizes of the gaps are unknown. This record will be updated with the finished sequence as soon as it is available and the accession number will be preserved.
                                                                                                                                                                    Quality coverage: 7.04 in Q20 bases; agarose-fp

Inhibition of GPB8 expression or action in the tumorigenic cells. Inhibition of GPB8 expression or action in the tumorigenic cells. Inhibition of GPB8 expression of the tumorigenic cells results in an inhibition of the tumorigenic cells results in an inhibition of the tumorigenic cells results in an inhibition of the trumorigenic cells results in an inhibition of the trumorigenic cells and for cells and for delivering cells. Antagonists to GPB8 are used to rates specific antibodies (used as antagonists, as diagnostic reagents and for delivering toxins or other compounds to GPB8-expressing cells) and to screen for antibodies.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                             teggaceaceageactgetgeececagegatacaegtgtgtagetgagggggagtgteag 1263
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                        cgccagcactgctgcccggctggctacacctgcaacgtgaaggctcgatcctgcgagaag 1503
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                            gaagtggteictgcccagectgccacettcetggcccgtagccctcacgtgggtgtgaag 1563

in AAB4339 to AAB44239. The proteins can have activities based on the tissues and cells the genes are expressed in. Example of activities include: cytostatic; proliferative; vulnerary; immunomodulator; antidiabetic; antiasthmatic; antiallergic; antiarthritic; antidiabetic; antiasthmatic; antiallergic; antiarthritic; antidiabetic; antiasthmatic; antiallergic; antibacterial; antiviral; dermatological; neuroprotective; cardiant; thrombolytic; coagulant; nootropic; vasotropic; antipsoriatic and antianglogenic. The polynucleotides and polypeptides can be used for preventing, treating or meliorating medical conditions and diagnosing pathological conditions. Polynucleotides, polypeptides, antibodies, agonists and antagonists from the present invention may be used to treat immune disorders by activating or inhibiting the proliferation, differentiation or mobilisation of immune cells, to treat disorders of haematopoletic cells, autoimmune disorders, allergic reactions, graft versus host disease and organ rejection, modulate haemostatic or thrombolytic activity, modulate infeations. The peptides, nucleotides, antibodies, agonists and antagonists may be also be used in drug screens. AAC78449 to the control of the

The present invention describes primer sets for synthesising 5602 full-length cDNAs defined in the specification. Where a primer set comprises: (a) an oligo-dT primer and an oligonucleotide complementary to the complementary strand of a polynucleotide which comprises one of the 5602 nucleotide sequences defined in the specification, where the oligonucleotide comprises at least 15 nucleotides; or (b) a combination of an oligonucleotide comprising a sequence complementary to the complementary strand of a polynucleotide which comprises a 5'-end sequence and an oligonucleotide comprises a 3'-end sequence, where the oligonucleotide comprises at least 15 nucleotides and the combination of oligonucleotide comprises at least 15 nucleotides and the combination of
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                   the 5'-end sequence/3'-end sequence is selected from those defined in the specification. The primer sets can be used in antisense therapy and in gene therapy. The primers are useful for synthesising polynucleotides, particularly full-length cDNAs. The primers are also useful for the detection and/or diagnosis of the abnormality of the proteins encoded by the full-length cDNAs. The primers allow obtaining of the full-length and AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 to AAH13633 and AAH13633 to AAH13632 to AAH13632

ET-1 and ET-2 were isolated from rat kidneys and their amino acid sequences determined. A full length rat ET cDNA (AAQ14338) was obtd. by screening a rat kidney cDNA library in lambda gill0 with PCR generated ET probes. These probes were also used to obtain the mouse ET gene (AAQ14340) from a mouse T-cell genomic library.

ET DNA was also obtained from human sources (AAQ14339).

An anti-sense ribonucleic amine sources (AAQ14339).

An anti-sense ribonucleic arid molecule complementary to the indicated fragment in the features is also claimed.

ET-1 is a bifunctional growth regulator, capable of stimulating the growth of some cell types while inhibiting the growth of some cell types while inhibiting the growth of some cell types will a further in the decivity. In contrast, however, ET-2 is apparently not capable of eliciting the growth stimulatory activity characteristic of ET-1 and, in fact, antagonises this ET-1 activity.

This murine cDNA sequence includes a coding region for GPB8 (see AAW85474), an 88 kDa glycoprotein autocrine growth factor and epithilin/granulin precursor that is expressed in a tightly epithilin/granulin precursor that is expressed and unregulated in highly tumprigenic cells derived from normal cells, and which acts as a stringentic cells derived from normal cells, and which tumorigenic cells. Inhibition of GPB8 expression or action in the tumorigenic cells results in an inhibition of the tumorigenic cells results to an inhibition of the tumorigenic cells results to an inhibition of the tumorigenic cells as probe obtained by PCR using primers, based on isolated GPB8 ceptides. Antagonists to GPB8 are used to treat diseases associated with increased expression of GPB8, particularly cancer but also viral infections. Fragments of GPB8, particularly cancer but also viral infections. Fragments of GPB8, particularly cancer cells) and to screen for antibodies. Antiseases antagonists, as diagnostic reagents cells) and to screen for antibodies. Antisease oligonucleotides can also be used as antagonists. Methods are provided for resulting from altered GPB8 activity.

immunogenic portion of an ovarian carcinoma protein (or its variants). Ovarian carcinoma proteins, and polynucleotides encoding them, have cytostatic activity and can be used in gene therapy and vaccines. Ovarian carcinoma polypeptides, nucleic acids, antibodies and vaccines are useful for the prevention, diagnosis and treatment of cancer, preferably ovarian cancer. ANA69691 to ANA70177 and AAB12552 to AAB12557 represent human ovarian carcinoma polynucleotides and proteins used in the exemplification of the present invention.

                                                                                                                                                                                                                                               sequences determined. A full length rat ET cDNA was obtd. by screening a rat kidney cDNA library in lambda gt10 with PCR generated ET probes. These probes were also used to obtain the mouse ET gene (AAQ14340) from a mouse T-cell genomic library. ET DNA was also obtained from human sources (AAQ14339)

                                                                                                                                                                                                                                                                                                      An anti-sense ribonucleic acid molecule complementary to the indicated fragment in the features is also claimed.

Err-1 is a bifunctional growth regulator, capable of stimulating the growth of some cell types while inhibiting the growth of others.

Err-2 is functionally similar to Er-1 w.r.t. growth inhibitory bloactivity. In contrast, however, Er-2 is apparently not capable of eliciting the growth stimulatory activity characteristic of Er-1 and,

A full length rat ET cDNA (AAQ14338) was obtd. by screening a rat kidney cDNA library in lambda gtl0 with PCR generated ET probes. These probes were also used to obtain the mouse ET gene (AAQ14340) from a mouse T-cell genomic library. ET DNA was also obtained from human sources (AAQ14339). An anti-sense ribonucleic acid molecule complementary to the indicated fragment in the features is also claimed.

                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                 480
ET-1 is a bifunctional growth regulator, capable of stimulating the growth of some cell types while inhibiting the growth of others. ET-2 is functionally similar to ET-1 w.r.t. growth inhibitiory bloactivity. In contrast, however, ET-2 is apparently not capable of eliciting the growth stimulatory activity characteristic of ET-1 and, in fact, antegonises this ET-1 activity.

```
A single-stranded DNA (or its complementary strand or the corresp. double-stranded DNA) which comprises one of the 7837 '6S" sequences given in AAT19001-T26837 and which is able to hybridise to part of human genomic DNA, cDNA or mRNA is claimed. The GS (Gene Signature) sequences were obtained from 3'-directed cDNA libraries prepared from various human tissues; synthesis of cDNA libraries prepared of mRNA by using poly(T) as the sole primer. Since the 3'-untranslated sequence is unique to a particular mRNA species, almost all the 3'-oriented cDNAs hybridise with specific mRNAs. Each library is constructed so as to reflect accurately the relative abundance of different mRNAs in the particular tissue from which it was derived.
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                              120
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                           828

```
This invention describes a novel gene library (A) comprises a gene sequence (or its part) encoding a protein involved in amino acid synthesis, cellular/energy metabolism, metabolism of fatty acids/phospholipids, synthesis or breakdown of purines/pyrimidines/nucleosides/nucleotides, DNA replication/transcription/translation, or is a transport/binding protein. (A) are produced that correspond to the 3'-end of mRNA but without the polyA tail. They can be prepared more efficiently and with less effort than conventional libraries. AAK53436-AAK54275 represent fragments of the
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                Gene library containing sequences with specific 3'-ends and no polyA tail, encoding proteins involved in a wide range of cellular processes
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                      Murine; liver; gene/library; amino acid synthesis; binding protein; cell metabolism; energy metabolism; fatty acid metabolism; synthesis; phospholipid metabolism; purine; pyrimidine; nucleoside; nucleotide; replication; transcription; translation; transport protein; ss.

The invention comprises compositions used for the therapy and diagnosis of ovarian cancer. The compositions comprise one or more ovarian tumour proteins, their associated polynuclectides, or immunogenic portions of the proteins. The ovarian tumour polynucleotides and polypeptides are useful for stimulating and/or expanding T cells specific for a tumour protein. They are also useful for inhibiting the development of cancer in a patient with an ovarian tumour DNA or protein by incubating isolated
                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                                nmunogenic protein; cancer; ovarian tumour; T-cell stimulation; ss;

3,
T-cells allowing them to proliferate, and administering to the patient. The sequences can be used as markers for cancer, for example, to monitor ovarian cancer progression. Probes and primers are useful in nucleic acid hybridisation, in detecting the presence of complementary sequences in a given sample, for preparing mutant species and for preparing quber genetic constructions. Sequences AAS23820-AAS25231 and AAS25328-AAS25549

The ovarian tumour protein and polynucleotide sequences have cytostatic activity, and can be used in gene therapy and vaccine production. The ovarian tumour proteins and polynucleotides can be used to inhibit the development of cancer, particularly ovarian cancer. They can also be used to diagnose the onset and progression of cancer.
                                                                                                                                                                                                                                                                        882
